Optional tours/excursions will be available for purchase.

### 2 Days of Education Included featuring:

#### ISSS – NORMI™ IAQ STRATEGY, SAMPLING & SOLUTIONS

The NORMI™ IAQ Strategy, Sampling & Solutions is the intermediate assessor class that details the process of creating a sampling strategy, determining which samples and how many to take and designing a solutions protocol based on the IAQ Profile of that specific environment.

This course is designed to dig deep into the IAQ/Mold Assessment process and is especially helpful for Certified Mold Assessors who want to take a more wholistic approach to inspecting indoor environments. This course qualifies for fourteen (14) hours of continuing education toward the Florida DBPR MRSA/MRSR License.

“In this two-day class,” reports Doug Hoffman, Executive Director for NORMI, “I will be explaining the process of sampling indoor environments. Whether commercial or residential, the student will understand the process that is used every time to develop a strategy for what sampling media to use, the sampling process of each technique with hands-on participation, and the sanitization solutions available for lowering microbial loads.”

Space Limited. Children are welcome, contact our office for pricing. Extra fee for upgrades and excursions.
